

Ultrasonic Gas Flow Meters for Gas Processing Facilities

Custody Transfer, Process Control and Flare Measurement

2012 GPAC Operations and Maintenance Conference

SICK isn't just a name.

SICK AG Company Founder

- Dr. Erwin Sick founded the SICK, Inc company in Munich in 1946.
- Today the SICK name stands for technical innovation, quality and safety worldwide.

Erfinder
Praktiker
Unternehmer

1950: Patentanmeldung mit Langzeitwirkung

Am 5. Mai wird ein Patent auf die Autokollimations-Lichtschranke angemeldet. Geräte, die auf diesen neuen Ideen basieren, bilden noch heute einen wesentlichen Teil der Firmenproduktion.

1952: Großaufträge auf Messe für erste Unfallschutz Lichtvorhänge

Zusammen mit dem Pressorredakteur Walter Weingarten begründet Erwin Sick auf der Internationalen Wirtsch. Zeugnismesse in Hannover 1952 die SICK Lichtschranke.

SICK - at a glance

- Number of patents rose from 162 to 669 in the last 5 yrs
- More than **5100 employees** around the world
- More than **40 subsidiaries**
- 9 per cent of sales spent for R&D expenditures
- Group sales of about **1.1 Billion** in 2009
- **Innovation leader** in sensing technology

SICK - one of the leading manufacturers of sensors and sensor solutions for industrial applications worldwide

Why do we Measure?

Process Control

A 1% reduction in raw material that flows at 10 liters per minute and costs \$1.00 per liter generates a cost saving of \$52,560.00 per year assuming 24/7 operation 365 days a year.

Custody Transfer

A 3" ultrasonic meter that flows 25 MMSCF/D of natural gas at \$3.00 / thousand SCF equates to \$2,250,000.00 per month. Improving the accuracy by 1% will work out to a difference of \$22,500.00 per month.

Applications for Ultrasonic Meters

- Custody transfer
 - Customer delivery
 - Power plants
 - Pipeline exchange
- Transmission and Underground storage
- Pipeline operation
- Distribution gas companies
- Allocation
- Fuel gas
- Offshore
- Flare/Vent

Gas Ultrasonic Meters

Basic Principle of Operation

Measuring principle: Differential Transit Time

Travel time difference

$$t_{AB} = \frac{L}{c + v \cdot \cos \alpha}$$

$$t_{BA} = \frac{L}{c - v \cdot \cos \alpha}$$

Path velocity

$$v_{Pfad} = \frac{L}{2 \cdot \cos \alpha} \left(\frac{1}{t_{AB}} - \frac{1}{t_{BA}} \right)$$

Sound Velocity

$$c = \frac{L}{2} \left(\frac{1}{t_{AB}} + \frac{1}{t_{BA}} \right)$$

Key Benefits of Ultrasonic Gas Meters

- **Very high accuracy (+/- .1%) (flare 3-5%)**
- **Very wide flow range 200:1 (flare greater)**
- **Non-intrusive sensors**
- **No pressure drop or loss**
- **Not affected by changing gas composition**
- **No routine maintenance**
- **Maintenance indicator when needed**
- **No visual inspections required (safe)**
- **Sensor replacement under pressure**
- **Not damaged by liquids or solids in flow**
- **Flow condition monitoring with software**

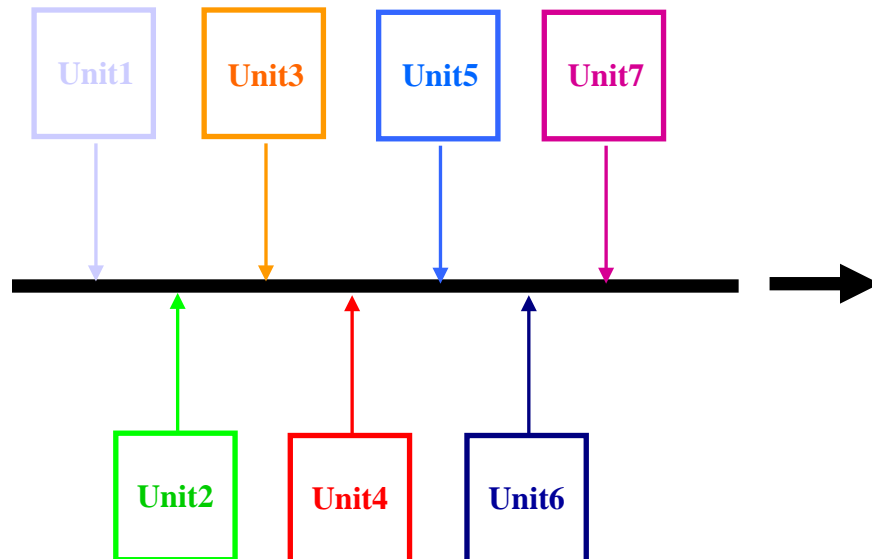

- This multi-path meter is suitable for:
 - Custody Transfer
 - Plant balance
 - Low pressure flare
 - Field metering including wet gas
 - Other gases (CO₂, H₂S, H₂)
- 2" to 30+" sizes
- 0 to 6000+ PSIG
- Flow profile measurement and correction

Application: Flare Gas

What is flare gas ?

- Standard operation of plant - small quantities of gas have to be burned or disposed of without venting
- In emergency case - very large quantities of gas can occur abruptly and have to be disposed immediately
- Composition of the gas varies

Flare Metering Challenges

- Very wide flow range required
 - Extreme velocity affects many intrusive meters
 - Liquids and other substances are common
 - Flow profile is not always consistent
 - Gas density is not consistent
 - Accuracy of +/- 5% is required
 - Extractable meter type is preferred
-
- Few measuring devices are suitable

- Ultrasonic Flare Meter:
 - High Pressure Flare
 - Sour Flare
 - Very High Velocity
- 4" to 71" sizes
- 4000 to 1 flow range
- Maintenance Indicator Alarm
- Probe type or cross pipe
- Unique velocity sensor design

Application: Sour Gas Measurement

Key Benefits

- Meters are corrosion resistant
- Self diagnostics means no meter inspections
- Safer to operate and maintain
- Extractable sensors without meter removal

Key Benefits

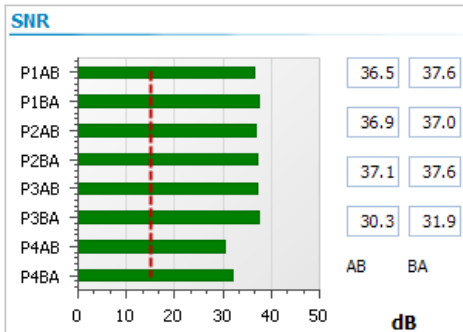

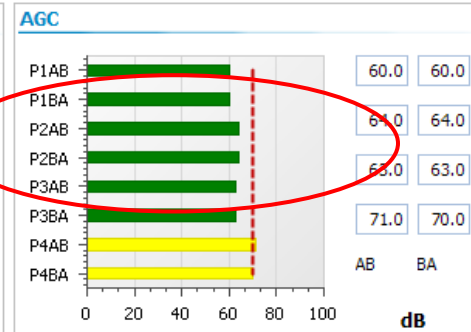

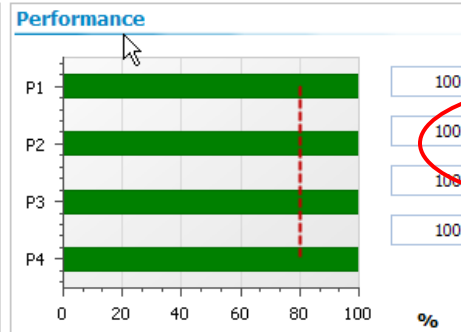

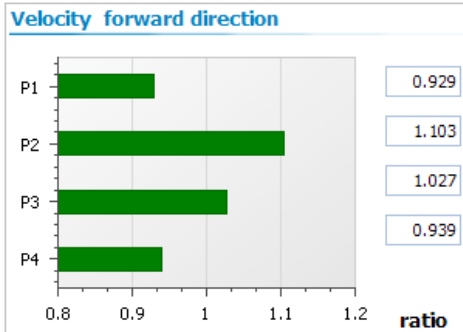

- Not damaged by liquid slugs
- No pressure loss/drop
- Multi-path accurate with up to 2% liquids
- Meters are corrosion resistant
- Diagnostics shows liquids history

Meter Values – Possible Path Contamination

Device status

Status Path 1	100%
Status Path 2	100%
Status Path 3	100%
Status Path 4	100%
Bit: 3	Warning SOS deviation
Bit: 2	Warning AGC limit
Device status: Measure mode	
Bit: 14	Pathcompensation possible
Bit: 3	Limit warning
Bit: 1	Measure valid
Bit: 0	Measure mode
